Subject: RE: Hawaii 2001 and 2003 emap data

Sara:

I will reply in more detail later, since I am in the middle of a short fuse item at the moment.

It is correct that there were regional Mamala Bay sampling efforts in 2001 and 2003. I made an attempt to collect the data from the Hi participants. Data from 01 and 03 were not included in the 2002 report. I have some raw data files from 03, and it looks like we may have gotten the 01 data into a database. I can't swear how complete the collections for either year may be. I have a copy of the 2001 design, and the analysis report of the benthic monitoring data from 01. I think I did some analyses of the 01 data for a few parameters.

Let me know your shopping list and I will see what all I have.

Walt

Hi Walt, Thanks for your response. It is good to know these details.

The two attached emails from Ross Tanimoto at the City and County of Honolulu (CCH) made me curious about the 2001 and 2003 data. Cindy Lin probably knows more about these data, but she is busy with a TMDL deadline. I am wondering how the 2001 and 2003 data relate to your report (*Condition for Estuaries and Bays of Hawaii for 2002: A Statistical Summary*). When I talked with Janet a little bit more this morning, she recalled that CCH conducted monitoring in 2001 and 2003 based on a regional sample design, and these surveys were in addition to the 2002 survey described in your report. Does that sound correct? I don't know if the 2001 and 2003 data were analyzed.

I will keep looking in our files for more details, and I will talk with Cindy when she has a few spare minutes. I'll also appreciate hearing any other details about the 2001-03 surveys.

Thanks, Sara

Sara:
I should have the original design information for the Hawaii surveys. Also, as a further piece of information, prior to EPA I was responsible for the initial design of the 301H monitoring programs for Barbers Point and Honouliuli, and produced most of the monitoring reports from the mid 80's until mid 90's for those outfalls. I have not kept up with the monitoring changes in the last decade, but am familiar with a number of the issues and challenges of sampling in that area. This is not the first time a regional monitoring program has been discussed for that area.

Gulf Breeze did the designs during this period. What I have is below. They used a very old hexagon sampling program that I would no longer recommend being used. If you want to keep the classes for Oahu, that would be fine. Virginia Hansen in Gulf Breeze may be able to provide more information.

It would be better to define the regions that are most appropriate for the NPDES discharge permit regions and the current NCCA regions for the area. Walt Nelson may also know more about the design and what may be appropriate for your question as well.

Having the regional permit monitoring integrated with NCCA 2015 may be desirable as well.

Tony

Hawaii	West	University of Hawaii EPA Region 10 EPA - WED	2	2001-2002	This design is comprised of a statewide assessment of estuaries and several special studies. The statewide samples were subdivided into 4 resource classes based on size with a special class for south shore Oahu estuaries (3 classes.) Each primary class used a different hexagonal grid size (0.55, 2.5, 4.98, 6.78 sq km) to result in 50 sampling sites (10, 10, 10, and 20, respectively). The three classes of south shore
--------	------	--	---	-----------	---

				<p>Oahu estuaries resulted in 3 grid sizes (0.05, 0.03 and 0.02 km²) and 30 sites (22, 3 and 5 sites, respectively). Additional intensifications for Oahu south shore beaches, inshore Mamala Bay and offshore Mamala Bay and two discharge areas were completed. The beach uses linear segments of 1075 m resulting in 30 probabilistic sites. The inshore Mamala Bay area uses a grid of 0.7 sq km and 30 sites while the offshore area used a grid of 2.22 sq km resulting in 40 sites. Within Mamala Bay there are two intensifications at discharge ports (one uses a grid of 0.05 sq km and 15 sites and the other at 0.01 sq km and 15 sites).</p>

Subject: Hawaii 2001 and 2003 emap data

Hi Dave,

The Hawaii Dept. of Health is in the process of reissuing NPDES discharge permits for two WWTP plants on south Oahu (Sand Island and Honouliuli). We would like to add a requirement to the permit for regional monitoring. I believe there were two emap studies on the coast of southern Oahu in 2001 and 2003. We thought it might be good to follow the same design during the next permit period. Do you have any information from these two studies from 2001 and 2003? I have found pieces of data sets, but I have not yet found the original study design or sample site locations.

By the way, we really appreciated the R training in March.

Thanks very much.
Sara
